[2012 DRAFT SG data request for CNOR 11_8_12 .docx](#)

Hi Lynn,

I think these all look fine. I just made some minor suggestions - mainly word-smithing/editorial, so it's totally up to you if you'd like to take or leave any of my edits. So sorry it took me so long to get to these! Let me know if you'd like me to go ahead and pass these along to Mike Thabault. Also, I haven't forgotten about your email yesterday about possibly setting up a conference call - I need to think about who would be appropriate to include on that, but we can probably get that arranged soon.

(See attached file: DRAFT sample email data call11_14_2012.doc)(See attached file: DRAFT cover letter_CNOR.docx)(See attached file: 2012 DRAFT SG data request for CNOR 11_8_12 .docx)

SubjectUpdated email and cover letter for the CNOR data
request

Here are the two pieces or correspondence I made changes to this morning: the email I send out to all those who will be collecting and submitting the data; and the signed cover letter we send to all the higher ups in the different agencies.

Hi all-

Attached you will find the data call request for our annual Candidate Notice of Review (CNOR) of the Greater sage-grouse. All information should be submitted to our office no later than **February 1, 2013**. Remember, this review will occur every year while the Greater sage-grouse is on the candidate list. The purpose of the annual review is to determine if the status of the species and/or its habitat(s) ~~status~~ has changed to the point that we need to change our determination on the species based on scientific data. Changes could include ONE of the following: an immediate proposal to list; taking the species off the candidate list entirely (~~it would if it~~ no longer warrants listing); no change in the species status (it remains a candidate with its current listing priority number); or the species remains a candidate but there is a change in the listing priority number.

As part of this annual review, the Service is soliciting new information regarding changes in the status of the Greater sage-grouse, its habitats, or scientific understanding of the species and its habitats, and any conservation efforts for the species. The March 2010 finding for the Greater sage-grouse identified habitat loss and fragmentation and insufficient regulatory mechanisms as the primary factors for designating the species as warranted for listing. Therefore, our annual review will primarily focus on any changes in these two factors. However, ~~realizing the interactive nature of the many items considered for the 2010 listing decisions since many other factors interact~~ with habitat condition and regulatory mechanisms, as discussed in our 2010 status review of the species, we would appreciate receiving any new information regarding sage-grouse and sagebrush status.

Attached is a list of information/data we are collecting for this annual review. To the extent possible, please provide the requested information, including spatial data when appropriate and available. More details of the types of data requested are included in the attached sheet. We have not specified a format for receiving the information requested and leave that to your discretion. However, please do not send raw data unless specifically requested on the attached sheet. All information should be submitted to our office no later than **February 1, 2013**.

A signed letter was mailed on **Friday, Jan. 27**, to all State Directors of State and Provincial wildlife agencies (British Columbia excepted), all BLM State Directors, all NRCS State Conservationists, Tribal contacts, and all Regional Foresters within the range of the Greater sage-grouse with an attached data call request (which is the same request I have included for you). However, as the task of collecting and submitting the data will likely fall to all of you, I wanted to make sure you had a copy as well.

Please forward this information on to all who need to see it. The list in the "to" box is the total of all contacts I've sent this to (with the exception of our FWS Tribal liaisons). I know there are folks I don't have the contact information on, and there may have been personnel changes over the past year. So if there is someone I've missed, please share it with them (***and send me that contact information too***).

Regina, Saskatchewan, Canada S4S 5W6

Dear Mr. Saigeon:

The U.S. Fish and Wildlife Service (Service) is initiating our annual review of the Greater sage-grouse (*Centrocercus urophasianus*), which was designated as a candidate species in March 2010, under the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*). ~~As a result, the Service will~~ reviews the ~~species'~~ status of candidate species annually to determine if any further listing action should be taken based on scientific data. Potential actions include one of the following: an immediate proposal to list; taking the species off the candidate list entirely (~~if it would no longer warrants~~ listing); no change in the species status (it remains a candidate with its current listing priority number); or the species remains a candidate but there is a change in the listing priority number.

As part of this annual review of the Greater sage-grouse, the Service is soliciting new information regarding changes in the status of the bird, its habitats, or scientific understanding of the species and its habitats, and any conservation efforts. The March 2010 finding for the Greater sage-grouse identified habitat loss and fragmentation and insufficient regulatory mechanisms as the primary factors for designating the species as warranted for listing. Therefore, our annual review will primarily focus on any changes in these two factors. However, ~~realizing the interactive nature of the many items considered for the 2010 listing decision since many other factors interact~~ with habitat condition and regulatory mechanisms, as discussed in our 2010 status review of the species, we would appreciate receiving any new information regarding sage-grouse and sagebrush status.

Attached is a list of information/data we are collecting for this annual review. To the extent possible, please provide the requested information, including spatial data when appropriate and available. More details of the types of data requested are included in the attached sheet. We have not specified a format for receiving the information requested and leave that to your discretion. However, please do not send raw data unless specifically requested on the attached sheet. All information should be submitted to our office no later than February 1, 2013.

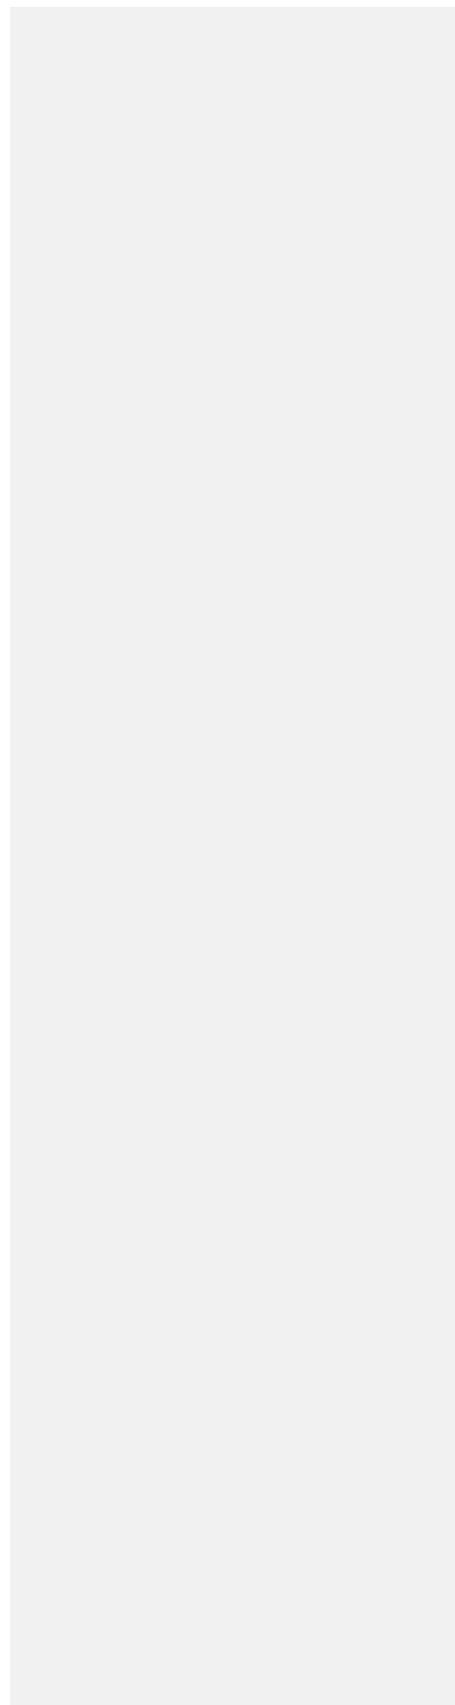

Formatted: Font: 11 pt, Underline

We appreciate your efforts in providing the Service the best scientific data regarding the Greater sage-grouse. If you have any questions, please do not hesitate to contact Lynn Gemlo at 307-772-2374, ext. 228, or by e-mail at lynn_gemlo@fws.gov.

Sincerely,

R. Mark Sattelberg
Field Supervisor
Wyoming Field Office

Data Request for the Annual Review of the Greater Sage-Grouse Candidate Status

The following is an outline of items for which we are requesting information. As part of this annual review, the Service is soliciting new information regarding changes in the status of the greater sage-grouse, its habitats, or scientific understanding of the species and its habitats. ~~It~~ **With** regard to conservation efforts, please provide information on the known effectiveness of ongoing conservation efforts and new conservation efforts as well as their certainty of implementation. This will assist us in our analysis of how conservation efforts have removed or reduced threats to the species. Please send any geospatial information you can share.

Your information sent in for this annual review will assist us in evaluating the species' status to determine if any further listing action should be taken based on scientific data.

We understand that not every responder will need to address every issue or have knowledge of some issues in their locale. Please provide the information that is applicable ~~for to~~ your area of jurisdiction. We are requesting information you may have collected between **January 2012** and **December 2012**. **Please submit all information by February 1, 2013, to the following address or by e-mail:**

U. S. Fish and Wildlife Service
Attention: Lynn Gemlo, Listing Coordinator
5353 Yellowstone Road, Suite 308A
Cheyenne, WY 82009
Phone Number: (307) 772-2374, Extension 228
E-Mail: lynn_gemlo@fws.gov

Data Request:

A. Population status, trends and numbers: This section is primarily directed towards State and Provincial agencies for response.

1. What are the population trends for your State or Province? If describing by population, please use the population descriptions identified in the 2006 WAFWA Conservation Strategy.
 - a. Is the trend expected given weather conditions and population cycling?
2. Has there been any significant change in the populations in your State or Province (more than normal annual fluctuations)?
 - a. If yes, do you know the cause of the population change? Please describe.

B. Habitat status and trends: To the extent possible, for each of items listed below please provide locations, populations affected, acreage affected and geospatial data if available.

The primary focus of these questions is directed at occupied habitats (at least during one season) or sagebrush habitats that are essential for long-term species persistence (e.g. connectivity corridors).

1. Areas of sagebrush lost due to permanent conversion (e.g. agricultural lands, subdivisions). In addition to the information requested above, please identify the stage of loss (e.g. proposed, in NEPA review, completed).
 - a. Please identify proposed areas of conversions that have a high certainty of occurrence.
2. Please identify areas that will be converted in association with Farm Bill Biomass Crop Assistance Program (BCAP).
3. For areas where CRP has/is providing habitat for sage-grouse, have there been areas where the lands have been put back into production, resulting in a loss of habitat? If so, please estimate the number of acres potentially lost.
4. Acres of occupied sagebrush habitats that were lost to fire (either wild or prescribed fires). ***For 2012, it was a particularly bad wildfire year. Please provide specifics as to the loss of suitable sagebrush habitats and impacts to sage-grouse.***
5. Expansion of conifers or cheatgrass into sagebrush.
6. Incursion of other invasive species that affects habitat quality and utility for sage-grouse. Please identify the invasive species.
7. Proposed energy developments within occupied sagebrush habitats. In addition to the items requested above, please identify the type (oil, gas, wind, solar, hydropower, geothermal, uranium, etc.) and stage of development, well/turbine/development density, and life of project.
8. Please provide information regarding new, proposed, or expanded mining activities in sagebrush habitats.
9. Transmission corridors for energy transmission. Include status (e.g. NEPA completed, under construction, proposed), and any efforts to minimize impacts to sage-grouse and sagebrush.
10. Grazing impacts – any significant changes that affect habitat abundance and quality. We are particularly interested in sagebrush treatments that either remove sagebrush habitats or alter their ability to provide current seasonal habitats (e.g. converting winter habitat to more open canopies that may support brood-rearing).
 - a. Please include treatments conducted for the benefit of wild ungulates.
 - b. Please identify any changes in wild equid status.
11. Please identify any known losses of habitat connectivity, both within and between populations.

C. Changes in Regulatory Mechanisms: Regulatory mechanisms are those that are enforceable by state or provincial statute, federal land management documents, etc. They do not include voluntary efforts; however, please provide information on any voluntary efforts that may be affecting sage-grouse and sagebrush habitats. If these efforts have not yet been implemented, or not yet shown to be effective, please identify those projects within the conservation efforts database.

1. Identify the status of BLM RMP revisions that will affect sage-grouse or sagebrush (either positive or negative), if any.
2. Identify any changes in the status of regulatory mechanisms that will affect sage-grouse or sagebrush (positive or negative) on other Federal lands (e.g. FS, NPS, military lands).
3. Identify any new regulatory mechanisms that minimize impacts from fire, invasives, energy development, etc. If new regulatory mechanisms are being considered, you should also identify those, along with the certainty of application.
4. Any new State, Provincial, or other local (e.g. county) efforts to address threats?

D. Hunting and other uses: (Please identify state or province)

1. Have there been any changes to hunting regulations for sage-grouse? If so, please identify the reason behind the change, and if applicable, any results.
2. Have there been any changes in recreational impacts (positive or negative) or in religious use of sage-grouse?
3. Please identify current research projects on sage-grouse in your State or Province, and whether or not the project includes bird capture or collaring.

E. Disease and Predation: (Please provide locations where appropriate)

1. Please report any West Nile virus outbreaks in 2012.
2. Are you aware of any new diseases/parasites that have population-level effects?
3. Do you have any data that suggests that predators may be limiting sage-grouse in any part of the range, independent of habitat conditions?
4. Do you have data that supports increases in predator populations that are affecting sage-grouse as the result of habitat alterations?

F. Other Factors:

1. Do you have any new information regarding negative effects of pesticides, contaminants, recreational activities or other human disturbance, drought and other climatic conditions on the greater sage-grouse?
2. Please report any new information on the impacts of climate change on sage-grouse or their habitats.

G. Literature:

1. Please identify any pertinent literature you feel is important for our review. In addition to citations, if you have cited any literature above, please provide the page numbers of the actual citation.

H. Contact person(s):

Please provide contact(s) information concerning data collection in case questions arise after the data has been reviewed.
