Importance: High

We also really appreciated the great conversation with you all. I have just gotten back in the office and have forwarded your request to Sue. Once we have an opportunity to meet and discuss the availability of information you have requested, I'll be back in touch.

Hope all is well.

Hello Jennifer,

Jamestown would like to thank you and Lorenz for meeting with Hansi, Diana and I regarding the Tribe's aquaculture project on the Dungeness lease site. We found the meeting to be quite productive and very much look forward to working with the Refuge as the Tribe moves forward with the Individual Permit. Attached please find the notes from our meeting on 5/24/2018.

Per our discussion, the Tribe is requesting any available data/information that the Refuge may have on the following:

- Shore bird/water fowl data – we are happy to receive raw data or in database format, from any time period and location collected within or in close proximity to the Refuge. If time constraints for compiling data older datasets are of concern, our preferred time period is 1980 – 2018.
- Shellfish aquaculture contribution to marine debris

- Forage fish data
- Benthic/epibenthic community structure and composition data
- Human disturbance data – particularly response of shore bird/water fowl to human activities

Any quantitative/qualitative data or even anecdotal information on any of the above would be extremely helpful as we prepare our site-specific environmental assessment. The Tribe is happy to coordinate with Sue Thomas in acquiring any available data and information about methodologies used.

Thank you very much for your assistance as we move forward with this process.

Sincerely,

Liz Tobin
