---

Would you be available to meet with Lorenz and me to discuss the intricacies of aquaculture gear removal on Dungeness and Graveyard Spits on August 28th? I started trying to write up the information and it got confusing pretty quick. It would probably be best if we sat down and talked about it with a map in front of us.

Let us know if the 28th works.

Jennifer,

I believe this is the week that you and Sue would be able to think about the debris patrols. Please let me and Liz know if you have any questions for us. We look forward to hearing what you think the best approach would be. Thanks, Hansi

Thanks for our conversation Jennifer. Here is the language related to debris patrols. We want to figure out the best way to accomplish this. Please let us know what you and Sue think may work best. The Tribe is open to any/all suggestions and methods. Thank you very much for the data that you sent off to Liz. Have a nice Fourth of July. I understand that we won't hear back on this until close to the end of July ---- so actually, have a nice Most of July. Hansi

22. At least once every three months, beaches in the project vicinity will be patrolled by crews who will retrieve debris (e.g., anti-predator nets, bags, stakes, disks, tubes) that escape from the project area. Within the project vicinity, locations will be identified where debris tends to accumulate due to wave, current, or wind action, and after weather events these locations shall be patrolled by crews who will remove and dispose of shellfish related debris appropriately. A record shall be maintained with the following information and the record will be made available upon request to the Corps, NMFS, and USFWS: date of patrol, location of areas patrolled, description of the type and amount of retrieved debris, other pertinent information.
