Good morning Jennifer,

I'm just getting back into the office. DNR's newer leases (2012 and on) often have a reporting element that's similar to what you're asking about. Unfortunately, this lease doesn't have those type of obligations so our understanding of the historical uses out there is limited.

Subject: Aquaculture history question

Does DNR keep records describing aquaculture practices and uses on a leased site? For example, do operators provide a yearly summary of number of acres farmed, or techniques and equipment used?

I'm trying to get a better understanding of the historic use of the lease in Dungeness Bay. The leases provide a framework, but they don't necessarily tell the whole story about how much or what type of use is actually happening in any given year.

Thanks for your help,

Jennifer
