Kevin,

Jennifer and staff went thru and did an analysis of the gear collection protocol in the BO and laid out what would work to protect the resources at Dungeness NWR. Can we have a conversation today to go over this and discuss next steps?

C

This was the simplest way to address your edits without re-writing/reformatting. If it doesn't work, let me know and I will dive back in with a large eraser and a full well of ink.

**Subject:** Aquaculture Gear Retrieval

Attached are our first thoughts regarding Refuge acces for gear retrieval associated with the proposed commercial aquaculture farm in Dungeness Bay. The suggested measures are based on current infomation and would likely be edited during Appropriateness and Compatibility review processes.

It is important to note, these actions are in addition to the disturbance caused by overall farming activities. Negative impacts to Refuge Purpose have already been cited in our various letters to the permitting agencies. It is necessary to consider affects to Refuge Purpose from this cummulative human disturbance, when assessing the limited activities that we have jurisdiction to permit.

Please let us know if reformatting is needed for discussion purposes, or if there is any additional information that is needed at this time.
