---

Attached is final ms of a paper in press in the journal Ecosphere, with some text that I highlighted for reference. Figure 3 (Page 48) depicts the period 2002-2012, showing earlier increase followed by decline. Figure 4 compares the increase in Burrowing Owl abundance with increase in owl predation on storm-petrels. Given that these figures is now pretty out of date, I'd like to see if Point Blue could provide more updated figures.

Figure 6 has revised versions of the modelled changes in ASSP population size and chance of decline given different scenarios of owl population reduction. I think these are too technical for the Coastal Commission presentation but should be mentioned in the Consistency Determination.

Gerry - You mentioned that you have a report with updated figure showing SEFI population index for ASSP beyond 2012 (see example below) - can you send me the whole report? I need to provide to the graphic artist for the ppt. Thanks
