FYI. Thought you might be interested in this one. We are seeing a bit more of this on our motion-activated cameras set up in Bat Cave. It appears that mice are taking storm-petrel eggs and chicks. I believe these are the endemic island deer mice but not 100% sure. Wasn't sure if images like this might be helpful to your efforts at the Farallones Gerry.

Let me know if you think you might like some of these images that show chick and egg depredation by mice.

Mike

Check out this Reconyx series. Dave, Jim, and I are pretty sure this mouse is carrying off an ASSP chick. Crazy!
