Should be okay to use these however you like. I would say credit as: photo credit: NPS/CIES

One thing to remember is that these are "native" deer mice at Cruz. So folks may need to make sure they understand that when presenting the info. But it still can show the impact of mice on seabirds.

Thanks, Mike! Point Blue is leading up an effort to put a short video or series of video clips (that will likely include still images) for Farallon project outreach. Would you give us permission to use these images in that and perhaps other outreach media we may put together? No pressure if you don't feel comfortable. But if so, please provide appropriate credit.

Thanks.

No single photo of mice with an egg in mouth. This series show a mouse eating an egg but it isn't super clear but the best we currently have.

Mike
