<b>Brief Project Description:</b>	The U.S. Fish and Wildlife Service proposes the eradication of the invasive house mouse on the South Farallon Islands. The preferred alternative is the aerial application of the rodenticide Brodifacoum-25D Conservation. The Farallon Islands																						

	comprise four groups of small islands located about 30 miles west of San Francisco. Together, they constitute the Farallon Islands National Wildlife Refuge, administered by the USFWS. The islands host the largest seabird breeding colony in the lower 48 United States. Twenty-five percent of California's breeding seabirds - an estimated 350,000 individuals of 13 species, breed on the South Farallon Islands. About 50% of the world population of the rare ashy storm-petrel (listed as a Species of Management Concern by the USFWS and a Bird Species of Special Concern by the California Department of Fish and Wildlife) breed on the islands. Other rare and endemic wildlife and plants make the Farallones a unique ecosystem. The invasive house mice pose a pervasive threat to these important natural resources. We anticipate that the complete removal of mice would allow many of the island's natural ecosystem processes to be restored.
